

MEMORANDUM OF UNDERSTANDING

Market Making Pilot Program in Debt Securities of the Republic of Georgia

7 October 2022

Whereas:

- The development of the government securities market is a necessary precondition for the capital market development;
- Georgia represented by the Ministry of Finance (hereinafter MoF) with the support of the National Bank of Georgia (hereinafter NBG) plans to establish a Primary Dealer system with the aim of lowering the cost of issuance while establishing a reliable yield curve and attracting new investors into the market. The deepening of the government securities market should contribute to the development of the whole financial market, encourage savings and enable NBG to use indirect instruments of monetary policy;
- The Primary Dealers are expected to contribute to the financial market development by acting as intermediaries between the issuer and the investors, by contributing to the process of diversification of the investor base, and enhancing the secondary market liquidity via regular price quoting and the provision of appropriate trading and settlement infrastructure for every participant of the market.
- To pave the way for the introduction of a fully-fledged Primary Dealer system, it is deemed useful to start with a Market-Making Pilot Program (MMPP) with a more narrow focus than a fully-fledged Primary Dealer system. The aim is to establish a simplified set of duties and privileges in order to better assess benefits and drawbacks and calibrate the system before expanding it to the wider local currency government securities market. This would enable the gradual development of the market making capacity of the financial intermediaries and minimize the financial risks to which they are exposed in the early development stages.
- For the effective implementation of the MMPP it is necessary to detail the main duties and privileges of the parties involved.
